

Cloud-based Enterprise PST Migration to Microsoft Office 365™

“ TransVault has pioneered the migration market space and has produced a benchmark whereby all migration companies are measured. ”

Dennis Wild, Product Manager,
Archiving (IAP) at Hewlett-Packard

TRANVAULT™ PST INSIGHT DELIVERS UNPARALLELED ANALYSIS, MANAGEMENT AND SCALABILITY FOR TACKLING ENTERPRISE PST FILES AND INDIVIDUAL PST CONTENTS.

TO THE CLOUD. FROM THE CLOUD.™

Many organizations planning an on-premises Exchange upgrade or a switch to the Cloud seek an opportunity to eliminate the costs, support overheads and data management risks associated with PST files. But sometimes the challenge is too big!

TransVault™ PST Insight is an advanced, enterprise-level solution that enables PST contents to be analyzed and selectively migrated to Microsoft Exchange or Office 365.

TransVault PST Insight addresses the many challenges of handling large PST estates, delivering powerful analysis, item-level capture, de-duplication and migration, together with advanced automation and monitoring.....all delivered as a convenient and highly-scalable Cloud-based service.

Get Clear Visibility: Whether on file servers, local disks, office-based PCs or roving laptops, TransVault PST Insight gives you a detailed view of your enterprise PST content with the ability to drill into areas of interest:

- What items are older than your organization's retention policy?
- Is there business data such as spreadsheets that should be secured?
- Is evidence relevant to an eDiscovery exercise out there?

'Top offenders', graphs and management reports help determine what action, if any, to take.

Granular Control: Following analysis, you can use PST Insight to enforce policies to manage and migrate your data in line with business, operational and compliance needs and filter according to many criteria including age, size, owner, sender, message class, attachments, etc. Example policies and commands include:

- Copy contents less than 3 months old into Primary mailboxes.
- Delete contents older than 7 years 'in situ'.
- Move other content to In-Place Archives.
- Re-hydrate any legacy shortcuts in PSTs.
- Copy selected contents to a given location (e.g. for Early Case Assessment).

Move with Confidence: PST Insight monitors every aspect of your PST management activity, with real time data movement tracking and detailed reports to give you peace of mind your PSTs are getting under control.

Ensure Zero User Impact: A further challenge when tackling PST projects of this scope is that of locked files: *If a user has his/her PST file open in Outlook, access by other agents is blocked.* TransVault PST Insight is designed to be able to scan locked PST files and collect copies of emails without stopping end users from working.

Unparalleled Scalability: PST Insight has been designed with a highly scalable yet low-footprint framework that eases the process of locating and interacting with PST files across complex and/or distributed environments. And, with **PST Insight in Azure** you can ease deployment and distribution for optimum ingestion speeds with minimal network impact and rollout times.

Cope With Complexity: Tricky issues such as determining ownership and removing passwords are automatically taken care of. And, if a legacy email archive has led to shortcuts in PSTs, PST Insight gives you the option to delete them or replace them with the full item before migration. PST Insight can also detect duplicate PSTs, avoiding multiple copies of the same item being migrated and saving lots of time, expense and end user confusion.

Manage PSTs in Place: PST Insight lets you manage PSTs 'in situ' using a range of commands which can be deployed as one-off actions or enforced as ongoing policies, these include:

- Maintain a central backup copy
- Delete specified items (e.g. emails older than 5 years)
- Flag all newly created content

At all times PST Insight keeps track of activity, providing progress updates and reports to demonstrate policy enforcement.

No other PST management and migration solution gives you as much power to cope with the PST challenge.

Success Story

Driven by a pressing legal requirement, a leading US loan company had an urgent need to collect all PSTs across the network and migrate them to a centralized repository so they could perform eDiscovery on the contents.

At first glance, the company believed it had around 7,000 PST files to deal with. However, these were estimates and did not take into consideration all the duplicate files that existed as a consequence of backups. Furthermore, not all locations within the company's network had been properly scanned for PSTs.

Using PST Insight, TransVault Partner, Integro, actually discovered their client had almost 10,000 PSTs in total...

With this amount of data to be pulled back across its network for analysis, the company potentially faced what could be an extremely lengthy and disruptive investigation period.

Using TransVault PST Insight, Integro was able to start culling the data set before migration, thereby minimizing what needed to be dealt with.

After all of the customer PST files were located, Integro started scanning the contents for all emails sent or received between March 2010 and October 2012. They were then able to collect the date relevant emails into a central location, making them available to their customer's eDiscovery application.

Additionally by eliminating duplicates, the customer only needed to transfer around 850GB of data across their network.

This was **one tenth** of what otherwise would have needed to be collected - massively reducing the amount of data to be pulled across the network and speeding up eDiscovery times.

“This is a weight off the IT department's minds because they are not required to prepare users for the data collection process. It also eases the concern amongst legal teams, who will generally be focussed on making sure no salient data is missed during the PST project, an oversight that can lead to further legal expenses. ▸ ▸”

Scott Hyman,
Senior Consultant at
Integro,

FACTS & FIGURES

- Reduced data to be moved by 90%
- 10,000 PSTs scanned
- PSTs centralized for eDiscovery

Accelerate your move in Azure

- Builds on the experience gained from 1,350+ migration projects to deliver unmatched results.
- Eliminates the time and expense involved in on-premises server configuration.
- Gived unrivalled visibility of the actual contents of your PST files.
- Minimizes data volumes to be transferred by enabling selective migrations.
- Policy-based migrations to primary Microsoft Office 365 mailboxes or In-Place Archives.
- Ensures a seamless experience for end-users with automatic shortcut handling and zero downtime.
- Meet compliance needs with confidence via our full auditing and reporting to prove chain-of-custody.
- Professional services available through a select global network of TransVault certified partners.

ABOUT TRANSVAULT

Since 2007 TransVault has led the market with its highly specialized email archive migration solutions for the enterprise.

When businesses encounter technological change brought on by a merger or acquisition, a planned shift to the Cloud, or the obsolescence of their archive or storage solution—they turn to TransVault to preserve accessibility to their business records.

Over 1,350 customers from around the world have relied on the TransVault architecture to protect the integrity of their valuable legacy data whilst ensuring chain-of-custody, faultless eDiscovery and seamless user accessibility—no matter the complexity of the migration, nor the archive platform.

TransVault products are available through a global network of partners. For more information contact TransVault at Info@TransVault.com or visit www.TransVault.com

TO THE CLOUD. FROM THE CLOUD.

The task of ingesting of highly distributed PST content into Microsoft Office 365 can be costly and complex - both in planning and execution.

TransVault Insight in Azure eliminates these barriers, leveraging the Azure cloud topology to achieve maximum enterprise scalability.

You're 3 Easy Steps Away from a FREE TransVault PST Insight Scan

Profile an unlimited amount of PSTs, generate unlimited management reports and copy 200,000 messages into Office 365.

- 1) Go to: www.TransVault.com/movemydsts
- 2) Register
- 3) Click

Alternatively visit the Microsoft Azure Marketplace and start your move today.
